understanding the 15 different tulip groups

Posted in All Gardening Advice, Bulbs, September, October, Tulips on 1st October 2018

Below is the full list of the different tulip groups, with a little specification, as well as an example. We hope from this you can learn a bit more to help you pick the tulip that's right for you.

Single Early

Single flowered cultivars, these have cup-shaped flowers approx 7.5cm wide and are some of the earliest to flower.

E.g. [Apricot Beauty](#)

Double Early

Double-flowered cultivars, mainly short-stemmed and early-flowering. Very good long lasting properties, most suitable for cut flowers. These have double, peony like flowers approx 7.5-10cm wide.

E.g. [Exotic Emperor](#)

Triumph

Single-flowered cultivars, stem of medium height, flowering in mid-season. Originally the result of hybridization between cultivars of the Single early group and the Single late group – also known as Mid-season tulips. Another variety with good lasting properties. These have conical flowers and are more rounded, up to 7.5cm wide.

E.g. [Jan Reus](#)

Darwin

Single-flowered cultivars, long-stemmed, flowering in mid-season (April/May). Originally the result of hybridization between cultivars of the Darwin group with Tulipa Fosteriana, and the result of hybridization between other cultivars and botanical tulips. They have habits similar to that of the Fosteriana. These have huge, goblet-like flowers up to 15cm across.

E.g. [Design Impression](#)

Single Late

Single-flowered cultivars, mainly long-stemmed and late-flowering. This group includes such tulips as those from the former Darwin and Cottage Type groups. Versatile with large flowers on strong stems. These have oval to almost squarish flowers (often with pointed petals).

E.g. [Red Georgette](#), [Bruine Wimpel](#)

Lily-flowered

Single-flowered cultivar, flowering mid-season or late, stem length varies. These have long, slim flowers with pointed petals flaring out at their tips (like a Lily, hence their name), approx 15cm across.

E.g. [Sapporo](#), [Ballerina](#)

Fringed

Leave a comment

Share this:

Print this page

Single-flowered cultivars, petals edged with crystalline fringes, flowering mid-season or late. Stem of variable length.

E.g. [Purple Tower](#)

Viridiflora

These are distinguished by having green streaks or markings on their petals and are normally late flowerers. There are only about 50 or so of these types of tulips.

E.g. [Flaming Spring Green](#), [China Town](#)

Rembrandt

Cultivars with broken flower colours; striped or marked with brown, bronze, black, red, pink or purple, on a red, white or yellow background. Cause of markings is a non-spreading virus infection. Long-stemmed.

E.g. [Absalon](#)

Parrot

Cultivar with unusual fringed, curled and twisted petals. Mainly late-flowering. Stems of variable length. These have large flowers can also be bi-coloured.

E.g. [Rococo](#)

Double Late / Peony-flowered

These have large, fully double flowers up to 12cm wide.

E.g. [Double Maureen](#)

Kaufmanniana Hybrids

One of the most permanent tulip varieties. These have water-lily like flowers which flatten out when open and can be bi-coloured and/or have striped or mottled leaves.

E.g. Hearts Delight

Fosteriana Hybrids

These have many cultivars, subspecies, varieties and hybrids. Early-flowering variety with broad leaves which can be sometimes mottled or striped. Stems medium to long. These have slender flowers when closed which open up to approx 18-20cm in full sun.

E.g. [Purissima](#)

Greigii Hybrids

Usually marbled or striped foliage, flowering later than those in the Kaufmanniana group. Leaves usually spread out and bend down toward the ground. Almost permanent variety, coming up year after year. These have large brightly coloured flowers.

E.g. Red Riding Hood

Species

Perennial species of tulip, they are also known as Botanical Tulips. These are smaller and more delicate than modern hybrids, but are normally very hardy and long lived.

E.g. [whittallii](#)
